Education

JECRC University, Jaipur 2023 – Present

Bachelor of Technology in Computer Science & Engineering *CGPA: 8.47*

Projects

SafeHire AI – AI-Powered Scam Job Detection System 2026

Python, TensorFlow/Keras, Pandas, NumPy,LSTM, Flask [GitHub]

- Developed an **LSTM-based NLP classifier** to detect fraudulent job postings by combining and preprocessing textual job features from a dataset of 17,880 job postings.
- Built a text preprocessing pipeline using **tokenization, sequence padding, and SMOTE** to convert job descriptions into fixed-length numerical sequences and handle class imbalance.
- Designed a **TensorFlow/Keras LSTM model** with an embedding layer, LSTM, dense layers, dropout, and sigmoid output, achieving approximately **98% accuracy and 0.98 F1-score**.
- Deployed the trained model using **Flask**, enabling users to enter job descriptions and receive real-time fraud probability and classification through a web interface.

ANN Customer Churn Prediction 2026

Python, TensorFlow/Keras, Scikit-learn, Pandas, NumPy, Streamlit [GitHub]

- Developed an Artificial Neural Network (ANN) classifier to predict bank customer churn using a dataset of 10,000 customer records, achieving 86.05% validation accuracy.
- Built a preprocessing pipeline using **Label Encoding, One-Hot Encoding, and StandardScaler**, and saved the preprocessing artifacts for consistent model inference.
- Designed a **TensorFlow/Keras** neural network with ReLU hidden layers and a sigmoid output layer, trained using Binary Cross-Entropy loss and the Adam optimizer for binary classification.
- Deployed the trained model using **Streamlit**, enabling users to input customer details and receive real-time churn probability with a binary prediction through a reusable inference pipeline.

Smart Expense Tracker Ongoing

Python, Pandas, Streamlit, Plotly, Matplotlib [GitHub]

- Developed a personal expense tracking application using Python with a **Streamlit dashboard** and command-line interface for managing and analyzing expenses.
- Implemented expense storage using Python's **CSV module**, allowing users to add, view, and manage expense records with automatically recorded dates.
- Used **Pandas** for loading expense data into DataFrames and performing filtering, grouping, and aggregation for spending analysis and monthly summaries.
- Created spending visualizations using **Plotly** for an interactive category-wise donut chart in the Streamlit dashboard and **Matplotlib** for a category bar chart in the CLI.
- Implemented budgeting, category-wise summaries, monthly expense analysis, and text-based report generation to help users monitor and understand their spending patterns.

Technical Skills

***Languages*:** Python, C++
***Libraries & Frameworks*:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn, TensorFlow, Keras, Streamlit
***Concepts*:** Machine Learning, Deep Learning, NLP, Feature Engineering, Data Wrangling

Certifications

Google Cloud, Google Cloud Computing Foundations: Data, ML, and AI in Google Cloud Mar 2025

Smart India Hackathon (SIH) 2025 Selected among the **Top 5 teams** in the college Internal Round. Nov 2025

Google Cloud, Prepare Data for ML APIs on Google Cloud (Skill Badge) Mar 2025

Soft Skills

Problem Solving, Team Collaboration, Adaptability, Quick Learner
